

Paper Trade Associates ask:
Are you running clean dryer felts?
Does your current system work?

While chemical/flushing
type systems do help,
They do not effectively
clean these felts.

Major Paper Mills are finding a system that is giving the following benefits, at a rate of one new system per week!

- **ZERO PAPER DEFECTS FOR:** Dryer Scale, Pitch, Dust and Dirt Particles, Coating Scale, Doctor Marks.
- **IMPROVED DRYING PROFILES:** Clean felt translates into more uniform drying.
- **SPEED FROM IMPROVED DRYING:** Clean felts also mean better heat transfer and moisture evacuation.
- **CHEMICAL COST REDUCTION:** Systems now in place have cut chemical cleaning by a minimum of 50%, some have stopped all chemical use.
- **SAFETY IS ASSURED:** By eliminating/reducing the use of dangerous cleaning chemicals. The operator no longer spray-on any chemical or need to rinse out felts after chemical application due to the fully automated system.
- **HYDROLYSIS ELIMINATED:** Dirty felts cause hydrolysis, typically on felt edges. Contaminants, such as grease and oil, hold moisture in the felt. The combination of this, combined with the heat, cause premature failure of the monofilament strands.
- **FABRIC WEAR:** Dirty felts wear much more quickly than clean ones. Abrasives adhering to any piece of machine clothing traveling over rolls will abrade monofilament yarns.
- **LONGER FABRIC LIFE:** While you may be satisfied with your current fabric life, at today's clothing costs, extended life is easy math.

Our systems are even being endorsed by Clothing and Chemical Suppliers. Our system may reduce their short-term profit, but they understand that it WILL improve the performance of their products. This they know translates into increased opportunity for them as well.

The up front cost of this system is low, especially considering the ROI. Cost justifications can be measured in days as opposed to months or years. EXAMPLE: One customer on a large coated machine purchased (2) systems, one each for two of their dryer felts. After only three months, the payback allowed them to justify the remaining (6) systems for the rest of the machines dryer felts.
